

Sovereign
refurbishment

Choosing to have your mobile catering equipment refurbished, rather than replaced with new, is a cost-effective way to update old inefficient trolleys.

As experts in the design, manufacture and maintenance of catering trolleys, Sovereign is perfectly placed to refurb and modify your existing equipment. Our experienced and fully trained engineers have access to a well-equipped workshop at our centrally located Service Centre, based in the West Midlands.

Thanks to the knowledge and expertise of the Sovereign team, we can transform tired-looking equipment to refresh your onboard catering service, without the cost implications of new equipment. Depending on client requirements and applications, we can modify the whole structure, add additional display areas, change castors to improve manoeuvrability, and update branding to suit your corporate identity.

A fully-refurbished and modified trolley, fitted with quality parts by our experienced engineers, and that is well-maintained, will continue to function well for years to come and provide a much better service.
